

Computer Forensics Certificate Program

With the alarming rate of fraud, abuse and downright criminal activity on IT systems by hackers and even employees, be a part of the team that rights the wrongs, finds truth in the lies, and improves the workplace.

Although it is most often associated with the investigation of a wide variety of computer crime, computer forensics may also be used in civil proceedings. The discipline involves similar techniques and principles to data recovery, but with additional guidelines and practices designed to create a legal audit trail.

Computer crime is here to stay. Computer Forensics Specialists are needed by today's companies to determine the root cause of a hacker attack, collect evidence legally admissible in court, and protect corporate assets and reputation.

This program prepares you for a career in the fields of data recovery and forensics. You are introduced to the tools and procedures used in the field of Computer Forensics as well as the legal concepts of data collection and evidence handling.
